Molarity, Molality and Normality By Roberta C. Barbalace The quantitative relationship between chemical substances in a reaction is known as stoichiometry. Avogadro was a pioneer in this field of chemistry. Avogadro hypothesized that there was a specific number that would represent the number of atoms or molecules in a mole of that atom or molecule.

In chemistry, concentration of a solution is often measured in molarity (M), which is the number of moles of solute per liter of solution. This molar concentration ( $c_i$ ) is calculated by dividing the moles of solute ( $n_i$ ) by the total volume (V) of the :  $c_i = \frac{n_i}{V}$  The SI unit for molar concentration is mol/m<sup>3</sup>. However, mol/L is a more common unit for molarity.
